BANNED METHODS

1. Manipulation of Blood and Blood Components (i.e. Blood Doping, ozone haemotherapy)

- Withdrawal, manipulation and re-infusion of homologous, heterologous, or autologous, blood products or blood cells into the circulatory system with the exception of those performed for lifesaving purposes or the use of veterinary regenerative therapies for the treatment of musculoskeletal injury or disease.

2. Gene Doping

- Any form of genetic modification

PROHIBITION OF GENETIC THERAPY, GENE EDITING AND GENOME EDITING (effective 1 April 2025)

a. Definition of Genetic Therapy

A Genetic Therapy is defined as including any therapy, method or process which involves the use or administration of:

- oligomers or polymers of nucleic acid
- nucleic acid analogues
- genetically modified cells
- gene editing agents which are capable, at any time, of directly or indirectly causing an action or effect on, and/or manipulating, gene expression in any mammalian body,

2026 Equine Prohibited Substances List

- Prohibited Substances include any other substance with a similar chemical structure or similar biological effect(s).
- Prohibited Substances that are identified as Specified Substances in the List below should not in any way be considered less important or less dangerous than other Prohibited Substances. Rather, they are simply substances which are more likely to have been ingested by Horses for a purpose other than the enhancement of sport performance, for example, through a contaminated food substance.

including but not limited to gene editing agents with the capacity to alter genome sequences and/or the transcriptional, post-transcriptional or epigenetic regulation of gene expression.

For the avoidance of doubt, the following are not defined as a Genetic Therapy for the purpose of the FEI Equine Anti-Doping and Controlled Medication Regulations:

- the use or administration of autologous conditioned serum or “platelet-rich plasma” treatments which do not involve the transfer of whole cells / DNA.

b. Except as provided by the FEI Anti-Doping and Controlled Medication Regulations, the use or administration of a Genetic Therapy on or to a Horse is prohibited at all times.

c. Exempted Genetic Therapy

A Genetic Therapy may be used or administered to a specific Horse with the express prior approval of the FEI if that Genetic Therapy is used to treat an injury or disorder formally diagnosed by a Veterinarian, and:

- a. is not capable of modifying a Horse's heritable genome;
- b. does not pose a threat to the welfare of Horse;
- c. does not pose a threat to the integrity of the FEI or equestrian sport, either by having the potential to enhance or harm the performance of a Horse in a Competition.

d. Control and recording

The Horse Owner or Registered Trainer has the responsibility to inform and obtain the approval of the FEI of any intended Genetic Therapy to a Horse prior to such treatment, irrespective of whether it is to be administered before, in or out of competition. The Horse Owner or Registered Trainer must maintain full and accurate records of all such therapies – which must be kept for a minimum of five years and be readily available for inspection by the FEI and/or FEI Officials when requested.

2. Prohibition on Gene Editing and Genome Editing

a. Definition of Gene Editing

Gene Editing is defined as any process or treatment in respect of a Horse which involves the insertion, deletion and/or replacement of DNA at a specific site in the genome of the Horse.

b. Definition of Genome Editing

Genome Editing is defined as any process or treatment in respect of a Horse which involves the insertion, deletion and/or replacement of DNA in the genome of the Horse.

c. The use on, or administration or application to, any Horse of Gene Editing or Genome Editing is prohibited at all times
